PROFESSIONAL SUMMARY

Solo DevOps Engineer managing end-to-end infrastructure for 10 internal products and one enterprise client engagement across AWS and on-premises environments. Built an internal developer platform from scratch that standardized provisioning, introduced self-service workflows, and eliminated manual infrastructure requests. Reduced AWS spend by 43% through workload migration and cost governance, and cut a fully manual deployment process down by 83% via a custom automation framework built under strict enterprise network constraints.

EDUCATION

- NBN Sinhgad Technical Institutes Campus** Pune, India
• *B.E. Computer Engineering — CGPA: 8.05* 2021 – 2025

EXPERIENCE

- Associate DevOps Engineer (Full-Time) - Coditas Solutions LLP** Jan 2025 – Present
 - Internal Developer Platform:** Architected and built a self-service internal developer platform from scratch serving 10 products across dev/UAT/prod; parses YAML infra configs, detects changes via `yq` diffing, triggers GitHub-gated approvals, and dispatches Terraform provisioning (with Trivy scanning and plan validation) to AWS or on-prem Docker targets – eliminating ad-hoc infrastructure requests entirely.
 - Unified Container Strategy:** Standardized containerization using a Lambda Adapter pattern so identical Docker images run unmodified on both AWS Lambda and on-prem Docker hosts; eliminated per-stack entrypoint scripts and duplicate image maintenance across 10+ services.
 - Cost Optimization:** Reduced monthly AWS spend by -33% (\$2,100 → \$1,400) by migrating scheduled workloads from EC2 to Lambda and removing orphaned resources; implemented cost-allocation tagging across all projects and environments, enabling per-project cost visibility as additional products were onboarded onto the platform.
 - On-Prem Ops & Disaster Recovery:** Manage 3 Linux on-prem servers hosting 10+ Dockerized non-prod services, with automated Nginx config generation and port allocation removing manual edits during onboarding. Built an automated daily PostgreSQL backup pipeline (`pg_dump`, 3x retry, failure alerting, rsync to S3, last-5 retention) and authored/tested a disaster recovery plan.
 - Restricted-Environment Deployment Automation:** Designed a custom shell-based deployment framework for an enterprise client environment with no CI/CD platform and proxy-only connectivity; cut deployment time by 83% (20–30 min → 4–5 min across 4 servers), eliminated recurring human-error incidents, and introduced artifact-based rollback with sub-second recovery – replacing a process with zero prior automation.
- Associate DevOps Engineer (Intern) - Coditas Solutions LLP** Jul 2024 – Dec 2024
 - Onboarded into AWS infrastructure, containerization, IaC, and CI/CD tooling; assumed full production DevOps responsibilities from December 2024.
- Cloud Computing Intern - KasNet Technologies Pvt. Ltd.** Dec 2023 – Feb 2024
 - Optimized Azure SQL query performance and storage configuration, achieving a 20% improvement in query efficiency; built Power BI dashboards for operational analytics.

TECHNICAL SKILLS

- Cloud Platforms:** AWS (IAM, EC2, ECS Fargate, Lambda, API Gateway, CloudFront, S3, RDS, Route53, ACM, KMS, CloudWatch, Cost Explorer), Microsoft Azure
- Infrastructure as Code & CI/CD:** Terraform, GitHub Actions, Jenkins
- Containers & Runtime:** Docker, Podman, AWS Lambda Adapter
- Web Servers & Reverse Proxy:** Nginx, Apache HTTP Server (httpd)
- Programming & Scripting:** Python, Bash
- Databases & Storage:** PostgreSQL, MongoDB, Amazon S3
- Operating Systems:** Linux
- DevOps Practices:** GitOps, RBAC Design, Cost Optimization, Disaster Recovery Planning, Backup Automation

CERTIFICATIONS

- Microsoft Azure AZ-900 — Google Advanced Data Analytics — Google Cybersecurity Professional

ACHIEVEMENTS

- Winner – OKTO Track at UNFOLD 24 Hackathon, Bengaluru (Built & deployed MVP in 36 hours) | Published: AI-Based Varicose Vein Detection, IJARSCT Vol. 5 (2025)
